## Floor cleaning robot project report

Choose a mop based on your floor type. If you have a floor with a lot of textures, such as some tiled floors, you will want a more classic string mop or mop strip. If you have a smooth floor, the sponge mop will work fine. The built-in wrist mop bucket works well if you use a string or mop strip, but a bucket with a handle will work fine if you use a sponge mop. Spruce / Jessica Lombardi Choose a cleaning detergent designed for your floor type. Avoid advertised products using phrases such as mop and shine, as this can lead to a yellowing buildup over time. Spruce/Jessica Lombardi Prevent your floor from becoming sticky, muddy mess by sweeping or vacuuming the floor thoroughly before ever touching the mop to the floor. It's also a good time to pre-wash the sticky or gunky spots you notice when sweeping or vacuuming. Do this with a soapy sponge and water or your favorite household cleaning solution (make sure it is safe for your floor). Fir Tree / Jessica Lombardi Fill each bucket with hot water, which cleans better and faster than cold or warm water. Add the mopping detergent to the washing bucket. Avoid the temptation to double the amount of detergent in an effort to increase cleaning power (or speed). This is not a good idea, since extra concentrated washing water will not clean better, and it will only be more difficult to rinse. Always follow the instructions on the detergent label. Spruce/Jessica Lombardi Dip your mop into a bucket and squeeze it by wrist or by hand. Mops should be damp, not wet sopping. Too much water dripping from the mop can damage the floor and dramatically prolong the drying time. Spruce/ Jessica Lombardi Starts mopping the floor, works from one end to the other, and moves backwards so you always stand in an area that hasn't been removed to prevent tracking. Mop in a straight line if you use a sponge mop. For mops, mop in figure-8 motion to use your mop design most effectively. Fir Tree / Jessica Lombardi When you find hard or sticky spots, rub it quickly back and forth over the place, applying pressure down to remove the grime. For hard-to-reach corners and edges, you may need to crouch down and scrub the floor with a sponge or paper towel. Fir Tree / Jessica Lombardi After rubbing each small area of the floor, rinse your mop thoroughly in a rinse bucket. Dunk the mop up and down a few times, then wring out to remove as much dirty water as possible from the mop head. Spruce/Jessica Lombardi Repeat the mopping and rinsing process for each piece until you finish the floor. While you are working, keep an eye on the washing water and rinse the water. they become visibly gray or gloomy, empty and refill buckets. Using dirty laundry water or rinsing water only spreads dirty water to the floor and complicates the flushing process. The Spruce/ Jessica Lombardi At this point, your floor should now be quite clean, clean, little or no detergent residue left. But for extra cleaning steps, you can mop the entire floor last time using nothing but fresh hot rinse water. If your rinse water is completely dirty or sudsy, you will know the final rinse has been required. Rinse your mop and mop bucket thoroughly and let it dry completely before storing it. Let your floor dry completely before walking on it. RD.COM Got 20 Minutes? Take your favorite bathroom floor mop and mop and give some TLC to your bathroom Floor MopGrab bucket and mop your favorite and give some TLC to your bathroom floor. Focus on the angles and materials that are snagged first and then spread to a cleaner part of the room. Mirrors and windows are clean in the two roomsPick two rooms, bedroom or sitting room, and focus on the windows. With a glass cleaner in hand, starting from the top and working your way down, be sure not to leave any stripes. For old-fashioned tricks, use newspapers to create sparkling windows. The dust of the living roomElectronics and lights can be dusty quickly. Take a fleece wipe or dust removal spray and get behind all the nooks and crannies in your entertainment system and surrounding surfaces. Empty and replace the trash CanGrab a large garbage bag and go from room to room in your house and empty the trash can.
